COMPANY OVERVIEW

Company **Background**

BD Link Communication Limited is a private limited company incorporated in Bangladesh and awarded with the International Terrestrial Cable (ITC) & International Internet Gateway (IIG) license issued by the Bangladesh Telecommunication Regulatory Commission (BTRC).

BD Link is a venture of a team of well experienced and expert IT & Telecom entrepreneurs as well as one of the largest group of companies in Bangladesh engaged in successful businesses related to banking, human resources, hotel/resorts, trading and consulting, real estate, Cosmetics & toiletries, Consumer, university, telecommunication, etc

ITC is an alternative to the Submarine Cable, for connecting Bangladesh with Landing Stations in the other countries. The Submarine Cable (SMW4) had so far been the only way of global connectivity for Bangladesh. BD Link is working with Teir-1 companies which are other international network operators licensed to provide one-stop-shopping (OSS).

IIG serves as a gateway for routing International incoming and outgoing Internet based data traffic. The gateway is connected with the Submarine cable as well as the Terrestrial cable and with the Satellite Earth Station/VSAT as back up. All ISPs in Bangladesh can be connected to global internet through BD Link IIG ensuring a high speed.

Name of License:
International Terrestrial Cable (ITC)
Date of Award of License:
5th January, 2012

Name of License:
International Internet Gateway (IIG)
Date of Award of License:
12th April, 2012

Mission, Vision & **Strategy**

VISION:

To build a dependable and alternative telecommunication infrastructure for growing need of information technology within Bangladesh as well as the globe

MISSION:

To build an alternative Connectivity through International Terrestrial Cable System and to build an internet gateway for routing international incoming and outgoing internet based data traffic.

STRATEGY:

To blend our high-tech technology, considerable available cash flow, proper market research and highly qualified professional team to ensure a proper systematic flow towards our set target. Our potent combination of technology and services is supported by strategic alliances with other innovative companies. Together with our strong partners BD Link is opening the door to the next generation of global Telecommunication.

Other **Companies**

Bangla Tel Ltd (www.banglatel.com.bd) is another leading concern of the group which is licensed to operator as an International Voice Gateway (IGW). It has been working with the international telecom carriers including Tire-1 operators from across the globe.

primary business includes Bangladesh voice termination services, implementation of multiplatform voice networks, and retail & reseller solutions for VOIP services through network connectivity over International Private Leased Circuit [IPLC].

Jibondhara Solutions Ltd (www.jibondharasolutions.com.bd): BD Link is also partner of Jibondhara Solutions Ltd which has Interconnect Exchange (ICX) license from BTRC. Jibondhara is interconnected with all the Access Network Service (ANS) providers to handle domestic as well as international voice traffic.

Management – desktop 1440px

MANAGEMENT

BD Link Communication Ltd. management team represents some of the most experienced professionals in Bangladesh. Each team member brings their expertise and leadership experience to champion the success and growth of the telecommunications industry in Bangladesh.

Abdullah Al Hossain Robin

Managing Director at Bdlink communication limited

Abdullah Al Hossain Robin is an accomplished business leader in Bangladesh's Information and Communication Technology (ICT) industry, with over 20 years of experience spanning telecommunications infrastructure, international connectivity, submarine cable systems, internet gateway operations, cloud technologies, and digital infrastructure development.

Throughout his career, Mr. Robin has combined extensive technical expertise with strategic business leadership, contributing to the development, deployment, and management of large-scale telecommunications networks, IP/MPLS backbone infrastructure, International Internet Gateway (IIG) and International Terrestrial Cable (ITC) systems, ISP operations, international interconnection, and Content Delivery Network (CDN) solutions.

His professional journey includes senior management roles across engineering, Research & Development, and Pre-Sales, as well as experience in corporate leadership, business development, and strategic management. This diverse background has enabled him to develop a strong understanding of the technical, commercial, and operational dimensions of the ICT sector.

As a business leader, Mr. Robin is passionate about innovation, entrepreneurship, strategic partnerships, and sustainable business growth. He is focused on identifying emerging market opportunities, exploring new investment prospects, and transforming advanced technologies into commercially viable solutions that create lasting value for businesses and consumers.

His areas of interest include next-generation connectivity, cloud infrastructure, content localization, network optimization, digital services, and emerging technologies that support the evolving needs of modern enterprises.

With a forward-looking vision and a strong combination of industry knowledge, technical expertise, and business acumen, Mr. Robin is committed to fostering collaboration among business leaders, investors, technology providers, and industry stakeholders. His ambition is to contribute to the growth of Bangladesh's ICT ecosystem by promoting innovation, strengthening digital infrastructure, creating sustainable business opportunities, and advancing the country's digital transformation.

Anamul Hoque

CEO at Bdlink communication limited

Anamul Hoque is a telecommunications and ICT business leader with over 15 years of experience across Internet Service Providers (ISP), International Internet Gateways (IIG), International Terrestrial Cable (ITC), submarine cable infrastructure, AI, and data centers. His expertise spans digital connectivity, international bandwidth, network infrastructure, internet exchange, cloud computing, AI infrastructure, and strategic business development, with a focus on innovation, industry collaboration, and sustainable growth.

INTERNATIONAL

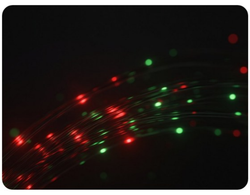

As our customers' businesses become more international, the need for timely communications with their overseas operations has increased. Corporate communications networks that can communicate information efficiently and reliably have become essential as the backbone of management strategy. The company's objective is to serve clients demanding in connecting with high speed circuit into the oversea. There are 3 categories of international high speed communication circuit, under the license of International Terrestrial Cable (ITC) as well as International Internet:

IPLC Service (International Private Leased Circuit) | Global Ethernet | MPLS VPN | International Internet Gateway (IIG or IP Port) and IP Transit Service | Submarine Cable (SMW5 / SMW4)

IPLC **Service** (International Private Leased Circuit)

IPLC is the International Private Leased Circuit in which the company's network, as a starting point, does connect directly to network of service providers in the oversea, and pass through the client's terminal point by using DWDM and SDH Technology as main network. Meanwhile, the technology of SDH, EoSDH, and TDM are used for network service. These are depend on client's demand and lease of speed by ranging from 64kbps - E1, DS3, STM1 to STM64 which provided high secure network and guaranteed in transferring speed of video and audio data with correctly and constantly. Circuits are not affected by congestion unlike overcrowded public networks, so communication is always reliable.

IPLC Service is suitable for multinational organizations, either big or small size of organization that wants to connect with the other counties as well as connecting with the international leased circuit and digital broadcasting providers of TV satellite.

Features & Benefits:

One Stop Shop (OSS) Features

Single End Ordering (SEO)
BD Link coordinates the ordering, provisioning and implementation of the IPLC end-to-end service with the foreign carrier on the Customer's behalf.

Single End Billing (SEB)
The Customer will receive a single bill from BD Link for the IPLC end-to-end service.

Single Point of Contact
Manageable and cost effective, BD Link IPLC works as your ultimate provider for global communication with multiple vendors on a single simple interface.

Single End Fault Reporting (SEFR)
The Customer shall only contact BD Link for any fault reporting.

Backup circuit service
For each IPLC that you sign up for, you will be able to use one backup circuit (reserve circuit) via a different route for the applicable international zone. BD Link offers priority backup solutions that are automatically activated when necessary.

Long Term Contracts
To help customers use the IPLC service more economically, BD Link offers discount plans for three- and five-year regular usage contracts. We will discount 5% and 10% from the monthly IPLC Service charges

Accessibility and Reliability
IPLC provides a totally dedicated, highly secure clear channel with superior high speed with far greater reach than any of the other global services. Using only the latest and most advanced cable systems in the world.

Global Coverage
With coverage in key business centers all over the world, we ensure that your best interests are maintained across geographical borders, now and in the future.

Communication speed
By selecting the optimum transmission speed for your communication volume and applications, you can build a highly efficient and economical international network.

International Private Leased Circuit (IPLC)

64kbps | 128kbps | 192kbps | 256kbps | 384kbps | 512kbps | 768kbps | 1Mbps | 1.5Mbps | 2Mbps | 6Mbps | 45Mbps | 150Mbps | 2.4Gbps

SERVICE LEVEL AGREEMENTS: Up to **99.99%** End to End circuit availability.

Global **Ethernet**

Now's the time to consider using Ethernet outside your Local Area Network (LAN). Ethernet services in the Wide Area Network (WAN) are growing in popularity for all the right reasons. The technology is quick to deploy, easy to manage and offers a cost effective way to enable your business. Therefore, users can reach to the video and audio data transmission properly, and get secure communications same as IPLC Service. Ethernet is becoming more and more important as an access technology, because of its reliability, cost-speed ratio and possibilities to upgrade. Businesses are increasingly embracing Global Ethernet services because of the enormous benefits and cost efficiency it brings. Global Ethernet is the best option for convergence layer technology to deliver unified communications. BD Link offers terminal multiplexing services to build a point-to-point SDH transmission network.. BD Link Ethernet Private Line (EPL) allows your organization to establish highly resilient network connections between your headquarters or data center and branch sites in many locations around the world. We can also provide a compact, cost effective and flexible solution to deliver multiple Ethernet channels. At the core, the SDH-based infrastructure provides an efficient long range transport vehicle for Ethernet traffic.

MPLS **VPN**

Provide a highly secure foundation that connects your corporate headquarters, data centers, branch offices, small offices and mobile workers to each other, and to the applications they use to be productive. With VPN, you can converge multiple networks into a MPLS-enabled IP VPN that allows users to rely on a single network to add solutions such as voice over IP capabilities, collaboration or cloud applications.

Key Features

- connects your customers' individual sites securely
- Enables to consolidation of voice, video and data
- Access to the fault management team 24/7 and rigorous Service Level Agreement
- Choose from a variety of access technologies
- Boost your margins by creating market-leading packages

International Internet **Gateway** (IIG or IP Port) and IP Transit Service

are the internet data communications services for connecting with internet service providers in both domestic and international. The company aims to offer these services to both domestic and international service providers as well as mobile phone and broadband service providers.

Submarine **Cable** (SMW5 / SMW4)

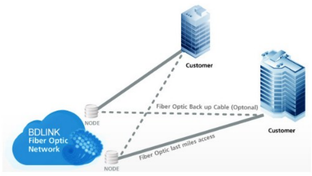

ITC is an alternative to the Submarine Cable, for connecting Bangladesh with Landing Stations in the other countries. The Submarine Cable (SMW4) had so far been the only way of global connectivity for Bangladesh.

DOMESTIC

Our fiber optic networks bring in efficient data transmission to corporate enterprises and other telecommunication companies that need rapid data transmission We focus on customer requirements, proposed network design and supplies solution which can meet different requirements of any business industries (Customization) together with technical supports by experienced & skilled network experts.

Metro **Ethernet** (ME)

Diagram

A metropolitan-area Ethernet, Ethernet MAN, or metro Ethernet network is a metropolitan area network (MAN) that is based on Ethernet standards using fiber optical as the main network to support huge data transmission in Bangladesh Metropolitan. BD Link Offers high-speed data, Internet, voice over IP (VoIP), video and other applications with flexible speeds of up to 10 Gbps. With Metro Ethernet you may be able to take advantage of your current router interface, avoiding the need to purchase additional equipment. Metro Ethernet is a cost-effective solution because it requires fewer physical interfaces, servers and routers to build your network than some other technologies, and it my allow you to use existing equipment you already have in place.

Customer support
BD Link monitors your network 24×7.

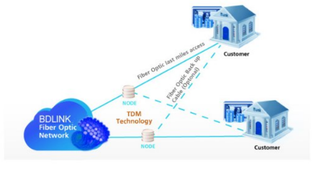

Ethernet over Synchronous Digital **Hierarchy** (EoSDH)

EoSDH' is delivered using BD Link's synchronous digital hierarchy network (SDH), which provides dedicated bandwidth for uncompromising quality. Ethernet over Synchronous Digital Hierarchy (EoSDH) is an exceedingly high speed circuit using Ethernet technology based on SDH network which is developed from the existing technology by combining the distinctive characteristic of each technology i.e. the outstanding feature of Ethernet is its ease of usage and prevalence whilst SDH is recognized for its reliability; hence, this combined technology is suitable for users that need reliable data transmission via Ethernet connection. Customers may wish to enhance their service and traffic management capabilities by implementing their own network overlay on our Ethernet services.

Transparent VLAN carriage and Jumbo Frames are supported on BD Link's 'EoSDH Network. Presently, the company offers EoSDH service from 2Mbps. to 10 Gbps. by combining SDH's distinctive characteristic of reliability in service with the widespread usage of Ethernet interface whereby this technology is suitable for users that require reliable data transmission based on Ethernet connect i.e. multinationals etc. Bandwidths are available from 2Mbit/s to 10Gbit/s

Synchronous Digital **Hierarchy** (SDH)

SDH (Synchronous Digital Hierarchy) is a standard technology for synchronous data transmission on optical media. It is the international equivalent of Synchronous Optical Network. Both technologies provide faster and less expensive network interconnection than traditional PDH (Plesiochronous Digital Hierarchy) equipment. There is reliable control system with uncomplicated and reliable capability to transmit long distance data. There is also route protection system with the ability to switch transmission cable in the event of damage incurred to regular cable to ensure continuity and reliability of data transmission. Presently, the company offers SDH service from 34Mbps. to 10 Gbps. via fiber optic cable to diverse customer

Global **MPLS**

Multiprotocol Label Switching (MPLS) is a protocol for speeding up and shaping network traffic flows. MPLS allows most packets to be forwarded at Layer 2 (the switching level) rather than having to be passed up to Layer 3 (the routing level). Each packet gets labeled on entry into the service provider's network by the ingress router. All the subsequent routing switches perform packet forwarding based only on those labels—they never look as far as the IP header. Finally, the egress router removes the label(s) and forwards the original IP packet toward its final destination.

EXPERIENCE

BD Link aims to provide service standard above Premium level to meet customer's satisfaction by offering the best BD Link leased circuit solutions in every way that customers can feel the touch of "Excellent Skill".

Service & **Delivery**

Fast Delivery: Punctually and promptness in installation is the key factor which enables BD link to maintain its excellence standard in servicing customers with a team of technically well trained and service minded staffs. The standard time of our service installation is negotiable and flexible according to customers' requirement.

First In Service **Test**

Prior to the delivery of network circuit to customers, assessment must be made to ensure that the circuits are achieved quality standard by the latest universal standard test equipments used for fiber optic and copper wire production plants as well as all pre-install equipment testing.

International Standard **Equipment**

BD Link chooses the best selection of cable lines and equipments from reputable manufacturers with universal industrial standard. Selection is made from stipulating cable and equipment specifications with manufacturer and assessment and examination by BD Link's team of experts. Customers can be assured that they will have the finest selection of cables and equipments especially selected by our team of experts

Service Level **Agreement** (SLA)

BD Link operates a Support Request System (SRS), which is available via the internet, by email (noc@bdlink.com.bd) and by the Telephone (+8801755648484) 24 hours per day, 7 days per week. BD Link's qualified personnel monitor the SRS and Manage the fault resolution process cooperating with the upstream provider's Network Operation Centre (NOC).

BD Link guarantees that the Service availability will be greater than **99.99%** within the billing period of related month.

Mean Time to Repair (MTTR)

BD Link will immediately diagnose and resolve the problem within 30 (thirty) minutes of response time for Critical and four to eight hours for Major issues. BD link will provide detail incident report with root causes for every Critical and Major tickets which must satisfy client. At the same time NOC will give cyclic report by email/SMS in every 30 minutes to the client if any case goes above 30 minutes for resolving the issue.

Escalation Process

If support requests have not been resolved within their resolution targets, the requests MUST be escalated by the assigned engineer to the 'Emergency Contacts' as mentioned below;

- **Email:** Send an email to "noc@bdlink.com.bd"
- **Telephone:** Call the 24X7 Emergency Hotline on +8802 8332548, +880 1755648484
- **FAX:** Send a Fax to +880 2 8333275

Monitoring

Preventive Maintenance: Non-stop network monitoring to ensure continuity and availability of our network is first on our agenda; hence, continuous preventive maintenance system is regularly set to minimize potential failure even during normal operation. Another vital unit is the Network Quality Team that examines every minor area but contributes significant result as to ensure the stability and safety of the entire system and network whereby the main 4 areas are as follows:

Customer Site

Our team of expert, with prior appointment, will inspect customer's premises to ensure that equipments and parts installed are operating smoothly and are prompt to receive feedback or comment from customers for further improvement.

Node

is the connecting point of core network and sub-networks. It is crucial to have equipment maintenance including influential environmental aspect that might affect data communication service i.e. maintenance of air conditioning to ensure that temperature and humidity are within the required standard, ensure that electrical power and backup are in place and ready at all time and that all network equipment are in good condition.

Last Mile

This is the delivering connectivity service to customer's internal and external premises with operating team to inspect connectivity at all time. Instantaneous remedy will be taken before there is any effect on connectivity services when failures occur.

NOC

BD Link´s NOC serves as the customer entry point for all service outage reports and other service related faults. We are staffed by customer service professionals specialized in the Telecommunications industry, all with technical backgrounds and customer management training, and fully integrated with the network surveillance and Fault Resolution.

- BD Link´s NOC has a staff of experienced network engineers with 24×7×365 working schedule.
- Able to communicate effectively in English.
- Reform and adjust the system within 3-4 hour.
- Feedbacks will be periodically given to customer as per the standard procedures.

- **Email:** Send an email to "noc@bdlink.com.bd"
- **Telephone:** Call the 24X7 Emergency Hotline on +8802 8332548, +880 1755648484
- **FAX:** Send a Fax to +880 2 8333275
